

FICHE TECHNIQUE

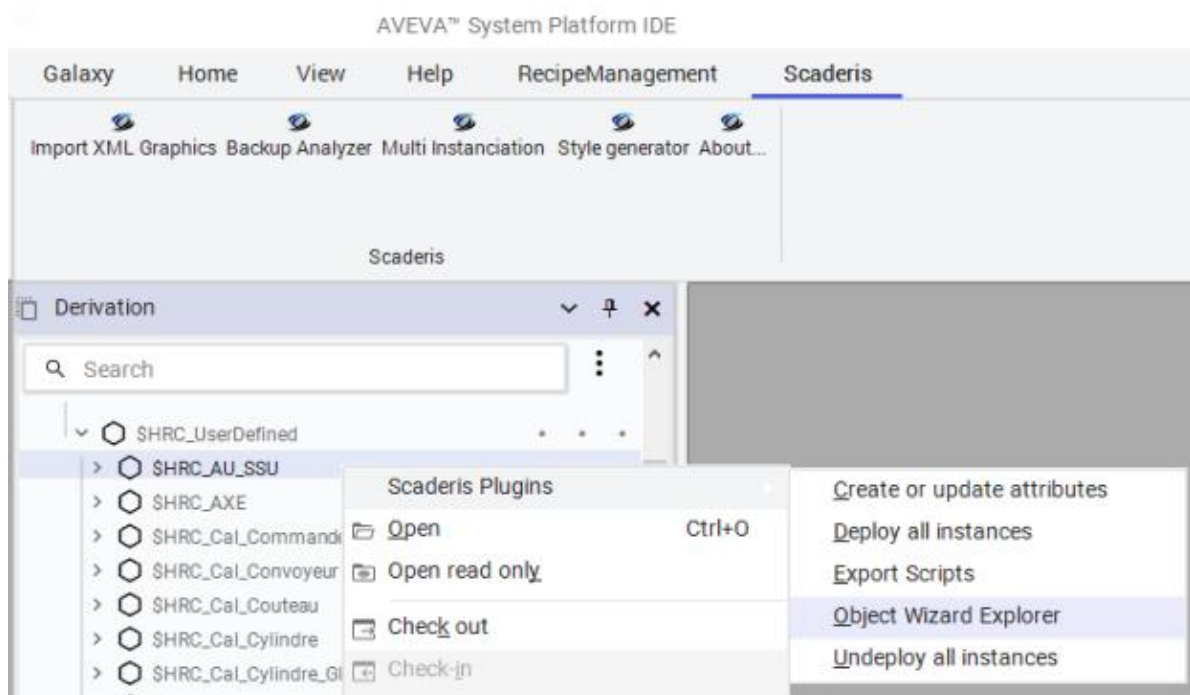

SCADERIS IDE Plugin

Advanced features for Aveva System Platform IDE

Improve your productivity with handy tools that integrate directly into your development environment.

This software is a plugin for Aveva System Platform IDE. It installs very easily and is free to use!

Development continues, and new features will be added over time.

Create/import attributes

This feature allows you to create attributes in bulk on a Template or Instance.

It is also possible to import attributes and scripts from another Template or Instance.

Enhanced Deploy/Undeploy

This feature allows you to Deploy or Undeploy all instances of a Template with a single click.

You can apply the action to all instances, only modified instances, or only undeployed instances.

Export Graphics

This feature allows you to export one or more selected Industrial Graphics (symbols) in XML format.

XML export is very useful for making bulk changes or performing searches.

Export Scripts

This feature allows you to export the scripts of a Template or Instance in XML format.

XML export is very useful for performing searches.

Galaxy Backup Analyzer

This feature allows you to analyze a Galaxy backup file (.CAB) to determine which version of Aveva System Platform it was created with and which version of SQL Server it requires.

Colors indicate whether a backup can be restored to the current Galaxy Repository (GR) or not.

Import Graphics

This feature allows you to import one or more Industrial Graphics (symbols) from XML files.

XML import is very useful for making bulk changes in Industrial Graphics.

Multi-instancing

This feature allows you to create instances in bulk from an Excel or CSV file.

Preliminary checks are performed, and data can be manually modified in the graphical interface.

Object Wizard Explorer

This feature allows you to display a summary of the Object Wizard settings for all instances of a Template.

In the IDE, it is impossible to have an overview of the Object Wizard configuration options for all instances.

Theme Creator

This feature allows you to generate a style library based on the Material Design color definitions (<https://m3.material.io/>).

XML import is very useful for making bulk changes in Industrial Graphics.

Watch List Generator

This feature allows you to generate Watch Lists (XML files) intended for Object Viewer.

You can filter attributes by different criteria.
